

## Unified Security Service

Censornet USS enables you to monitor and control Web, Email and Cloud Application use to provide complete security for your organisation from one dashboard.

---

CensorNet

## Features

- Cloud Application Visibility
- Cloud Application Control
- Safe anywhere on any device
- Safe Web Access
- Email Security
- Safe from Malware
- Analytics across email, web and applications
- Fast and Unobtrusive

## Description

Censornet USS enables you to monitor and control Web, Email and Cloud Application use to provide

complete security for your organisation from one dashboard. You can protect your employees, whether in the office or mobile, against cyber-attacks, and accidental or malicious leaks of sensitive data. Keeping your organisation safe from the risks associated with the rapid growth in cloud applications, and the emergence of Shadow IT. USS is a comprehensive cyber security service that combines modules for the security, monitoring and control of web, email and cloud application across your network in one dashboard and logging service, meaning that common policies can be easily applied and incidents tracked across different media. USS provides the security and control of an on-premise or end point component with the flexibility and mobility of a cloud service. It is the next generation in Email and Web security with Cloud Application Control giving you the power to extend web access policies to Bring Your Own Device initiatives and to monitor and control Shadow IT.

## Specification

### Software for Networks

Available as a downloadable software, CensorNet's Cloud Gateway software can be deployed on a virtual server or physical server in less than 30 minutes to extend security policies to the entire network

### Agent Software for Roaming Users or Standalone Devices

Microsoft Windows agent that enforces policies on the device. Tamper proof and simple to deploy either with an install wizard or scripted via Active Directory Group Policy. Mac OS X version will be available soon.

### Secure Browser for iOS

A secure browser app for iOS6 and above provides an alternative to Safari which extends the web access controls to the mobile device

### Scalable

Highly optimised for large networks, the solution takes advantage of multiple processors, all available RAM and has a 64-bit architecture

### Deployment Modes

Agent software, Direct proxy (set by group policy, WPAD or manually), or gateway mode for guest,

BYOD or non-domain devices

WPAD Support

Automatic creation of Web Proxy Automatic Discovery (WPAD) file based on network configuration

BYOD Captive Portal

The Captive Portal allows existing users or guests to adopt BYOD and log in from those devices with valid user credentials e.g. Active Directory
