Description

Management for Optimized Virtual Environments (MOVE) AntiVirus is optimized for protecting virtual environments such as Virtual Machines running virtualization (hypervisor) software like VMware ESX, Citrix Xen Server or Microsoft HyperV.

It removes the need to install an anti-virus application on every virtual machine (VM) by offloading all scanning to a dedicated security virtual machine (SVM) so that customers get the protection they need without sacrificing performance.

McAfee MOVE AntiVirus supports agentless deployment for VMware NSX and VMware vCNS and multi-platform deployment for all major hypervisors.
