

Web Gateway

McAfee Web Gateway delivers comprehensive security for all aspects of web traffic in one high-performance appliance software architecture.

McAfee

Features

- Common criteria EAL2+ and FIPS 140-2 Level 2 certified

- Available in multiple hardware models and as a virtual machine supporting VMware and Microsoft Hyper-V

- Integrated with complementary Intel® Security solutions including McAfee Advanced Threat Defense and McAfee Threat Intelligence Exchange

- Rated number one anti-malware in a secure web gateway (AV-TEST)

Description

McAfee Web Gateway delivers comprehensive security for all aspects of web traffic in one high-performance appliance software architecture. For user-initiated web requests, McAfee Web Gateway first enforces an organization's Internet use policy. For all allowed traffic, it then uses local and global techniques to analyze the nature and intent of all content and active code entering the network via the requested web pages, providing immediate protection against malware and other hidden threats. And,

unlike basic packet inspection techniques, McAfee Web Gateway can examine SSL traffic to provide in-depth protection against malicious code or control applications that have been hidden through encryption.
