

Cognosec Products

# Endpoint Protection

Endpoint protection provides security for a corporate network by closely monitoring the status and activities of connected devices and the software they use.

Every endpoint, every mobile phone, every laptop, creates a potential entry point for a hacker so protection is essential.

## About Cognosec Products

Our third party products are aligned with the NIST Cybersecurity Framework, a five-step system for protecting critical infrastructure, our solutions help you:

**Identify** problems, weaknesses and vulnerabilities

**Protect** data and systems through the implementation of tools and controls

**Detect** incidents, breaches and attacks

**Respond** effectively in the event of an attack and take remedial action

**Recover** promptly and resume 'business as usual'

They help fulfil legal and regulatory obligations – and protect the long-term interests of organizations.

## Why choose Cognosec?

**Seven** good reasons...

1. We're focused on value not volume – and on building long-term relationships with our clients.
2. We work on the principle that you should never recommend something you wouldn't be happy with yourself.
3. Our forensics teams have carried out several investigations into cyber crime cases and know the information required for court cases.
4. We provide a full-service approach – from initial analysis and assessment to troubleshooting and ongoing management.
5. Never complacent, we monitor our own monitoring, regularly reviewing systems and tools for their effectiveness and 'currency'.
6. We balance IT and data-security priorities with daily business needs.
7. **More than all this...**  
We take a 'bespoke' approach, tailoring our services to help our clients make the right decisions and the right investments. We know our interests are best served by serving yours.
